

FUTURES & FICTIONS: TECHNOLOGY, CRISIS, & SURVIVAL

This course explores how science fiction reflects and reshapes our understanding of the world and examines how writers imagine alternative futures to question technology, inequality, systems of power, and the limits of humanity. Students will develop critical tools for navigating the challenges that define our present moment.

What does the future of society look like amid ongoing environmental crises and rapid technological change?

What happens when we create things we can no longer control?

Summer Session 2:

**Mon/Wed
11-1:50 pm (Zoom)**

LTWL 124

Science Fiction
